

Fact Sheet

Enhancing Electric Service Reliability for Customers in Upper Providence Township, Montgomery County

This fact sheet contains important information about PECO's upcoming work to install advanced equipment and enhance the local electric distribution system to ensure continued safe and reliable service for our customers. If you have any questions about this work, please contact **PECO Engineering Assistant Randi Martin at 215-956-3113**.

Background

We continuously monitor our electric system to identify projects to help ensure safe and reliable service for our customers in the communities we serve. As part of this work we will be upgrading our aerial electrical equipment to continue to meet the needs of our customers in Upper Providence Township.

This project is part of PECO's System 2020 plan to invest an additional \$274 million through 2020 to install advanced equipment and reinforce the electric system, making it more weather resistant and less vulnerable to storm damage. This investment is in addition to \$500 million in ongoing system work completed each year, which includes replacing and upgrading equipment.

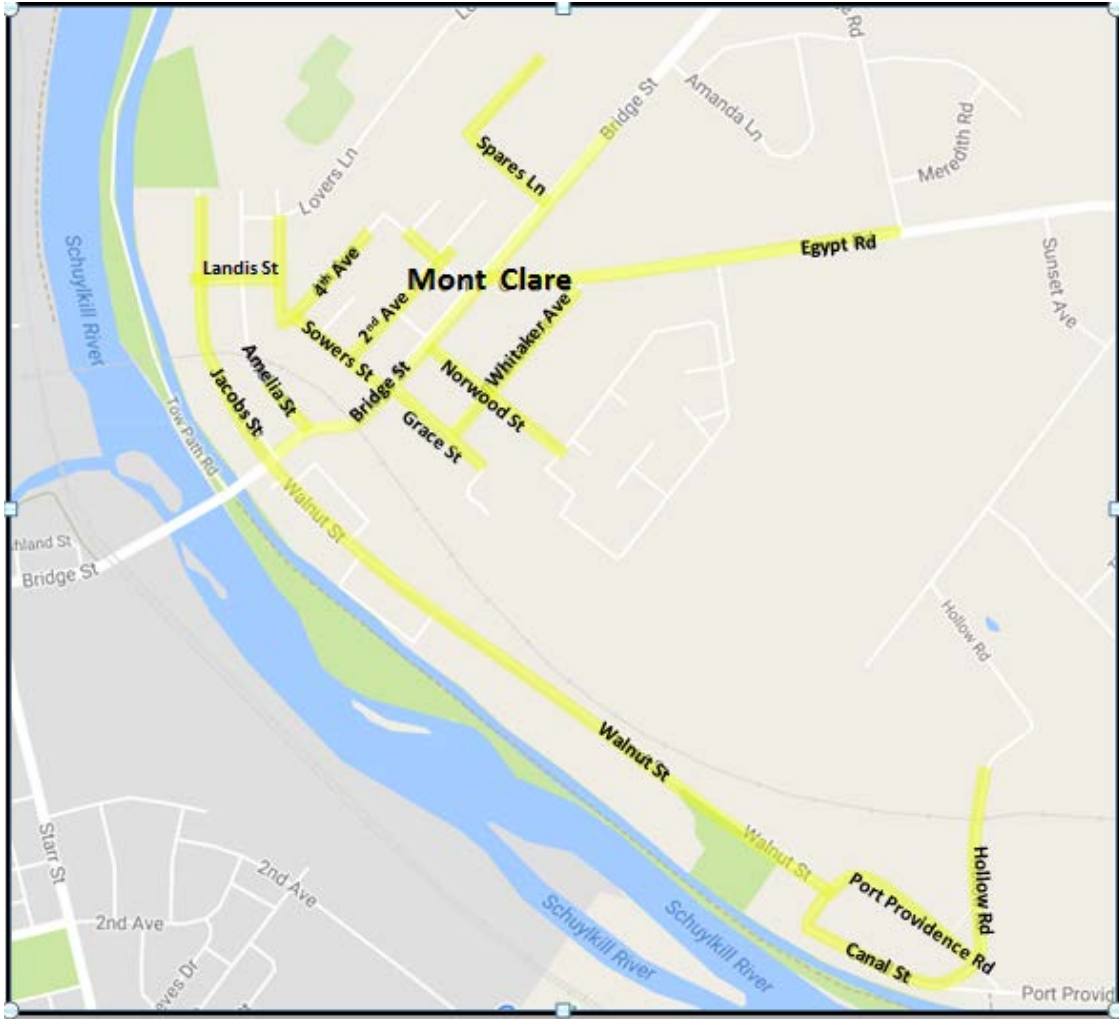

About the Project:

- We are investing more than \$2 million to enhance the local electric distribution system for more than 1,000 customers in your area.
- As part of this project, existing 4-kilovolt (kV) and 13kV electric distribution circuits will be upgraded to 34kV.
- New equipment, including more than 26,000 feet of new aerial electric cable, new transformers, and poles will be installed or replaced.
- Enhanced tree trimming around aerial power lines also will be performed along area streets.
- Work will occur near sidewalks and on some streets. In addition, some work also will occur on customer properties, up to, and including the meter. We will contact any customer prior to work being performed on your property.
- Work will occur along the highlighted roads (see map on reverse).
- Preliminary design work began in January 2017 and work is scheduled to begin in early July 2017.
- Work will occur from 7 a.m. to 5 p.m., Monday through Friday.
- The project is expected to be completed by March 2018, and work will be performed by PECO or a qualified PECO contractor.

What does this mean for customers?

- This project will enhance electric service reliability for more than 1,000 area customers.
- Since much of this work will be completed on area sidewalks, roadways and some customer properties, PECO will work closely with members of the community and local officials to minimize the impact of this project.
- Crews also may need to temporarily interrupt service to safely complete some of this work. We will work with customers to ensure they are informed in advance of our activities and any planned interruptions.
