

Keep Winter Wonderful!

Winter is coming! Help keep this winter wonderful by preventing stormwater pollution in our waterways. Just like rainwater, snow forms stormwater that can carry pollutants into storm drains and creeks.

Battling the ice and snow this season can pose a threat to our waterways if done improperly. Salt used to prevent ice on driveways, roads, and sidewalks makes its way into streams and can be toxic to wildlife. Snow that accumulates in streets can carry oils and toxins from the road into the water.

We all know that pests like rodents and insects love to hide out in our homes over the winter, but pesticides and insecticides eventually enter our waterways via stormwater and can be very harmful to aquatic environments.

Do your part this winter season to protect our watershed from stormwater pollution! Follow these tips to keep our water clean:
